Application No.: 10/531,234 Docket No.: REGIM 3.3-053

## IN THE ABSTRACT

This invention relates to novel derivates having general formula (I), wherein R<sub>1</sub> represents an amino or hydroxyl group, R<sub>2</sub> represents hydrogen or a methyl radical, R<sub>3</sub> represent hydrogen or a fluorine atom and A represents: group a, formula (II), wherein n represent an integer from 5 to 11, inclusive, R<sub>4</sub>, R<sub>5</sub>, which an be identical or different, represent independently of one or another hydrogen or a fluorine atom; group b, formula (III), wherein n, R<sub>4</sub>, R<sub>5</sub> have the same meaning as above. The invention also relates to the pharmaceutical compositions containing at least one of the aforementioned compounds by way of an active principle and to the use of said derivates for the production of medicaments which are intended for the treatment of hypercholesterolaemia or atherosclerosis.

Please delete the abstract as filed as substitute the abstract provided below:

The present invention relates to novel analide derivatives of formula I, enantiomers and stereoisomers thereof, and their pharmaceutically acceptable salts. The invention also relates to pharmaceutical compositions containing the compounds and methods of treating hypercholesterolemia and atherosclerosis therewith.
